About Us

We've come a long way since 1972...

We're nothing but proud to have grown our business from one machine (a JCB 3C Excavator) in 1972 to over 5,000 units in 2023. We now partner with world-leading manufacturers including Cat, Komatsu, JCB, Volvo, Bomag and Wacker Neuson.

From our first yard in Feltham, we now operate from a network of ten depots in Aberdeen, Northumberland, Penrith, Dublin, Manchester, Birmingham, Bicester, Newport, Leighton Buzzard and, of course, our purpose-built Head Office depot next to Wembley Stadium. From starting with Patrick Flannery over 50 years ago, we now have more than 1,600 operators supporting our clients on projects nationwide.

However, what we're most proud of is that we're still, at our core, a family business with strong values at its heart.

That's what has made us resilient, and will stand us in good stead for the next 50 years. Without doubt, what has kept us relevant over the years is our firm belief in and commitment to:

- People
- Safety
- Innovation and Sustainability
- Value

People stand at the centre of the Flannery proposition, providing excellence in service, plant standards and safety. By listening to our clients' specific requirements, keeping abreast of the latest legislation and maintaining a relentless level of investment, we truly have an unrivalled record of delivering quality and value.

As our respected manufacturers continue to develop technology, Flannery continues to innovate. Specifically with Digital Machine Solutions, finding ways to turn data into meaningful analysis and allowing customers to make hire decisions that deliver the most effective and reliable solution for them.

FLANNERY

Sustainability

At Flannery we are fully committed to a greener future for the construction industry - it's the only way!

We believe it is our social responsibility to invest in the latest innovative plant and equipment. Not only does this help to reduce the carbon footprint of our industry, it creates value for our customers through efficiencies in fuel savings and productivity.

Data that drives a green agenda

Flannery have invested significant resources into the development of the latest telematics consolidated dashboard alongside technology partner MachineMax. Clients can now have a complete view of their hire fleet, by project or product type allowing analysis of idle time, fuel burn and emissions, to make real time production management decisions. The system allows clients (and Flannery) to recognise training gaps and drive real behavioural change on site.

- Machine utilisation (as a %)
- Idle time fuel usage (litres)
- Fuel used (litres)
- Fuel saving (£)
- CO2 emissions (tonnes)
- Active / Idle hours
- Load count
- Average speed

Find out more via this QR code.

The largest fleet of hybrid and electric plant for hire in the UK.

Flannery continues to invest heavily in Komatsu hybrid excavators. With enhanced fuel-saving technology, the hybrid machines provide up to 30% reduction in fuel consumption and 20% CO2 reduction on site.

"It's been more than 12 years since we added our first Komatsu hybrid excavator to the fleet. We have built the largest hybrid fleet in Europe, with a further 20 units delivered in 2022 from Komatsu alone. We are proud to continue to enhance our offer to our clients enabling them to drive a greener, more sustainable construction site of the future."

Patrick Flannery, Managing Director - Flannery.

"We are delighted to have agreed on another deal with Flannery to supply more market-leading Komatsu hybrid excavators as they continue their strategy of creating a multi-fuel machine fleet. Once delivered, this means Flannery will be running the largest fleet of hybrid excavators in Europe."

Jeremy Nugent, Sales Director - Marubeni-Komatsu

Flannery continue our commitment to investing in the industry's 'Net Zero' goal with our purchase of the world's first 17m Electric Telehandler from Faresin. The team at Flannery are looking forward to incorporating this new telehandler into our electric fleet, as Niall Hester, Operations Director at Flannery Plant Hire, confirms:

"We have found the 6.26m full electric telehandler from Faresin to be very popular with customers, and since purchasing the first machine in 2020, we've bought a further five units, having proven themselves in the field.

All of the data from the electric telehandlers is now visible through the MachineMax dashboard for us and our customers. These machines are working on high-profile projects such as HS2, Thames Tideway and Highways England projects. The feedback has been very positive.

Given our experience to date with the smaller electric machines, we're confident that the new 17m telehandler

will perform just as well. We're delighted to be part of its introduction to the market, with our purchase of the world's first at Bauma 2022."

Safety Innovations

Here at Flannery we are proactive when it comes to plant safety and work in partnership with our suppliers and clients trialling and developing new initiatives.

OperateSAFE Campaign

As part of our safety program, all Flannery operators are issued with an OperateSAFE card as part of their on-boarding. This card empowers every Flannery employee to SPEAK UP & STOP WORK if they see unsafe acts or conditions.

Leica PA10 Personal Aid

In conjunction with Leica GeoSystems, Flannery now provides a real-time safety awareness solution for the entire construction site to increase worker safety and visibility to prevent collisions. The personal alert solution and collision avoidance technology means site staff are alerted through audio, visual and vibrations, meaning workers are more aware and safer than ever.

Cat Detect

Cat Detect technologies help you stay vigilant by using cameras and other sensors to improve operator's awareness of the work environment, reducing the chance of accidents and preventing unauthorised use of equipment.

Additional safety features available include:

- Secondary dead man devices
- Miller twin-lock hitch and Miller Mate operator guidance
- Green beacon seat belt engagement warning
- Height and slew restrictors
- Virtual box / working zone
- Visual safe load indicators

- Object and person detection systems
- Zero tail swing excavators up to 40T
- FOPS and ROPS cabs
- 360-degree cameras
- Operator-facing in-cab cameras
- Operator fatigue monitoring

- Fall protection systems on plant
- Boom and dipper check valves
- High-visibility seatbelts
- High-visibility hand rails and
- Wheel nut markers (where appropriate)

Pedestrian Detection Systems

Leading the hire industry in the adoption of Pedestrian Detection Systems.

Spillard Human Detection System

We will always prioritise safety on site, and constantly seek out innovations to help us ensure that both those operating our machines, and anybody within close proximity of them, go home safely at the end of each day.

For the last 30 years, Spillard Safety Systems have been working to provide visibility aids for construction machinery. Starting out with simple solutions like convex mirrors, and leading on to more complex items such as object detection and camera systems, they have worked closely with companies like Flannery to develop ways to tackle the People Plant Interface (PPI) safety issues.

Spillard identified a risk of humans entering 'blind spots' when machines are in operation, which resulted in them

working with their suppliers to develop a form of artificial intelligence that specifically detects the human form. This camera system relays live information to the machine operator when an individual has encroached into the pre-defined 'red zone'. but to also sounds an alarm that can be heard by the individual approaching that area

The aim is to give operators a system they can rely on to show them exactly where a person has encroached. Spillard and Flannery continue to work together and,

through the power of data. give clients the ability to correct behaviours as necessary, and alert safety managers to any causes for

SiteZone Proximity Warning System (PWS)

The SiteZone Proximity Warning System is an intelligent audible and visual warning system designed to reduce the risk of vehicle-personnel collisions and can be used where the proximity of people and vehicles working together is of concern.

Xwatch Laser Curtain

The Xwatch Laser Curtain technology prevents the machine from working outside a set working zone. Once initiated, this happens autonomously with no input from the operator.

Digital Machine Solutions

It has never been more possible to deliver all construction projects within specification, on time and on budget.

Over the last 15 years our frequent partnerships and collaborations with leading construction companies have seen us develop our digital machine solutions offering in line with the demands of the industry we serve, and we now have unrivalled expertise in the field.

Project sites are increasingly insisting on 3D machine control for earthworks, and we know that this is just the beginning of a huge shift in the construction environment to a new focus on measurable efficiency and sustainability. Equipment and sensors both on and off the machine provide cutting-edge machine control, unrivalled project precision and optimised safety on site.

Why digital machine control?

- **Improves site safety** by removing people from hazardous work zones
- Creates greener sites by reducing fuel and energy consumption and CO2 emissions
- Improves life-cycle costs by optimising workflows
- Saves time by reducing on-site surveyor reliance
- Cuts costs by reducing material reworking
- Increases machine productivity with significantly less down-time, idling and queuing
- Stay ahead of the competition

Find out more about how
Flannery's Digital Machine
Solutions can help streamline
your site here.

What we offer

- 2D Machine Control Guidance with Dual Grade Lasers and Tripods
- 3D GPS Machine Control Guidance offering both Radio and RTK licenced connection streams.
 We also offer base stations and GPS Rover hires with site setup and installation
- 3D UTS Machine Control Guidance with Total Stations for fine trimming works
- Remote support where Flannery can quickly and swiftly get you up and operational should you encounter an issue on site
- Site infrastructure 3D model conversion which can be imported locally or remotely by our support team
- Proximity warning systems
- Drone surveys of your site for accurate mapping

010

FLANNERY.

People Believe In Us

Flannery equipment can be seen on many of the UK's major projects and we are proud to work with a broad range of customers. This diversity has given us a great breadth of experience across many sectors, most extensively within the infrastructure sector, focused on motorway, rail, utility and airport projects. We have increasingly become involved in the decommissioning and improvement works at a variety of Ministry of Defence sites.

National Highways

- · Machine control, GPS, connected machines
- Flannery Plant Hire sits on Plant Focus Group and leads Raising the Bar Standards
- · HE Safety Leadership Award Winner

HS₂

- · HS2 Inducted Operators
- PTS qualified operators
- Dedicated CITB accredited **Training Centre**

Environment Agency

- · Biodegradable hydraulic oil
- Hybrid and all-electric plant and equipment
- · Sustainability School Gold Member and Partner

On Innovation

"Over the years, Flannery have continued to improve in all that they do. They're always at the forefront of bringing the industry into the future, with a team of friendly, helpful and knowledgeable individuals across all levels of the business. They're a company that I know will continue to succeed and I look forward to continuing to build on our working relationship."

Andrew Spencer, Head of Procurement & Supply Chain, Skanska UK

On Sustainability

"Flannery Plant Hire have played an active and leading role in sustainability in plant. Through their commitment to innovation and education, and being very active in and supportive of the Supply Chain Sustainability School, they have become a leading example of how the construction industry can be run in a way that lessens the impact to the environment whilst helping clients reduce unnecessary fuel costs and emissions."

James Cadman, Head of Consultancy & Carbon Action Sustainability, Supply Chain Sustainability School

Accreditations and memberships.

As part of our continuous drive to provide plant hire excellence to all our customers we have achieved a variety of industry accreditations to inspire their ongoing trust.

On Training and Inclusion

"We need to do more to attract women into this sector, but we won't achieve this kind of change or this kind of investment in the region without real partnership. What we see with Flannery and the associations they have made with some of our funded colleges and training providers is the ability to train people in the jobs we need to get the skills they need."

Clare Hatton, Director of Operations, Employment and Skills West Midlands Combined Authority

On Reliability

"Flannery have always been quick to deliver throughout all of our work together. Reliability is key in our business, and Flannery are always on hand to help us deliver our projects safely and on time."

Stephen Jackson, Head of Plant and Transport, O'Connor Group

012 **FLANNERY**

People | Safety | Innovation | Sustainability | Value flanneryplanthire.com

Operator Excellence

Training & skills come as standard.

Flannery pro-actively manage the health and wellbeing of our operators. Our Occupational Health Nurses are accredited to SEQOHS standard, with operators undergoing the appropriate 'fit for work' medical as specified by the project.

CCDO

Experienced and certified operators.

- CPCS CPC
- PTS/LUL
 EUSR
 BESC
- · Highways England Safety Passport
- HS2 Inducted
- Thames Water Safety Passport
- Thames Tideway Inducted
- Specialist training including tunnel safety

OperateSAFE Cards.

To ensure that unsafe practice is flagged without hesitation, we have introduced OperateSAFE cards. These cards act as a reminder to put safety and well-being first and empower Flannery people to SPEAK UP & STOP ANY ACTIVITY that could lead

Thumbs Up Training

We have a simple and clear
People Plant Interface 'Thumbs
Up' training programme, designed
to educate all site personnel as
to the dangers of plant and machinery on site
delivered by our in-house trainer network. The
'Thumbs Up' approach is simple:

STOP - LOOK - LISTEN - WAIT.

- When approaching a machine, stop in eyesight of the operator and signal to STOP.
- 2. LOOK to see that the operator has grounded the bucket or attachment and applied the deadman handle.
- **3. LISTEN** to hear the engine stop or revs drop.
- **4. WAIT** for the operator to give you the thumbs up, before approaching.

Training Videos

The training team continue to develop videos to support operators on site, from height and slew quick start guides to managing the people plant interface.

You can watch them all here.

Advanced operative health & safety training.

Safety is of paramount importance at Flannery. We continuously assess our team's safety and our clients' requirements to consistently exceed health and safety best practice. In support of this, we offer a comprehensive range of safety-based extras available across the fleet.

PLANT OPERATORS:

In addition to holding the CPCS category for the relevant item of plant, operators also undergo on-boarding and up-skilling to include training on:

- Identification & safe use of quick hitches
- Dual View dumper familiarisation
- CPCS lifting operations
- Correct use of an excavator as a crane
- People Plant Interface
- Eco-Operator Training
- GPS Familiarisation Training
- Specific attachment familiarisation
- Carry out daily checks on specific items of plant
- Height and Slew Restrictors

OPERATOR DATABASE:

- Live tracking of site inductions, CPCS tickets, health checks and plant familiarisation training
- The only plant hirer with a fully managed system
- Dedicated team of CPCS / NPORS Qualified Trainers to manage training needs on site

HGV OPERATORS:

- CPC Qualified HGV drivers
- CPCS Loader Securer and Plant Movements
- Lorry driver assessment
- Loadmaster training
- STGO and non-STGO Training
- · Working time directive training incl. fatigue policy

FITTERS:

- Trained in plant movements
- Trained in safe use of excavator as a crane
- Safe urban driving training

As a family business, people stand at the centre of our business proposition and getting everyone home safe every day is an absolute priority. Our rigorous "onboarding" process and fully integrated database and skills matrix tracks operators' tickets and renewals using a sophisticated gap-reporting process, ensuring we remain compliant on all sites.

Eco Operator

Skills Bootcamp

Flannery drive behavioural change through environmental training.

The long-term goals of achieving net zero on construction sites across the UK are well communicated. Whilst there are strategies in place that indicate the future machinery and specifically fuels we may use to get there, little has been agreed on the future skills and technologies operators will be required to deploy.

The aim of the **Eco-Operator training course** is to reduce, as far as possible, emissions of current internal combustion-engine equipment through minimising engine run time and efficient use of the equipment. This requires a clear education programme, and for the past two years we have been offering and developing the Eco-Operator training module for operators, supervisors and managers.

The Eco-Operator framework is designed to be relevant to the day-to-day use of plant on sites, setting parameters for consistent delivery that can provide evidence for improvement. The emphasis is then placed on each delegate to take personal ownership over the need to reduce emissions.

The Eco-Operator course is available now and is currently being deployed on sites across the UK.

"This training was something new and inspiring for me personally. Very useful and relevant information that made me think what impact my work has on the environment and how I can operate more effectively to reduce idle time. I'd definitely recommend it."

Andrew Beaumont, Machine Operator - Flannery

Plant training opportunities for new and experienced operators alike.

Flannery Plant Hire are proud to now be offering the **Skills Bootcamp in Plant Operations** as an option for new entrants looking to enter into the sector or to existing machine operators. This course is available fully funded to individuals or part funded through employers.

The Skills Bootcamp provides learners with valuable sector skills, with a guaranteed offer of an interview on completion of training. This innovative programme is changing the way that those outside the construction industry think about working within the sector.

By creating a safe space and the opportunity for new entrants to come to a controlled environment and learn new skills through plant operations, the Skills Bootcamp is directly targeting the issue of needing more plant operators in the UK - making the industry a more welcoming place for people to enter. Equally, the Skills Bootcamp also provides a great opportunity to existing operators who are looking to add to their current qualifications. Through this programme, we aim to ensure that all operators on sites across the UK are

fully trained with the latest information in how to not only operate the machines for their chosen tickets, but to do so safely and sustainably.

Trainees who successfully complete the Skills Bootcamp are taught invaluable tips to work towards the industry 'Net Zero' goal, such as limiting idling time and using less fuel. This training gives operators a bigger picture for what the overall goal of the industry is. Sharing this knowledge, and allowing entrants to do so for free or partially funded by their employer, through the Skills Bootcamp is creating a high quality standard across construction sites in the UK.

Find out more about how you can add to your existing skills, or gain completely new ones, at Flannery's Skills Bootcamp via this QR code.

Careers With Us

Everyone is welcome at Flannery

We believe that it's the people who make the company, and we're dedicated to creating a working environment that is safe and comfortable for all of our team members across the business.

Inclusivity and diversity are important to us, we're passionate about recruiting hard-working and talented people no matter where they come from. We care about helping people succeed in their chosen career path in plant hire by giving them industry leading training and support from the experts we already have working with us. At the heart of our commitment to all recruitment and training is one phrase - 'everyone is welcome at Flannery'.

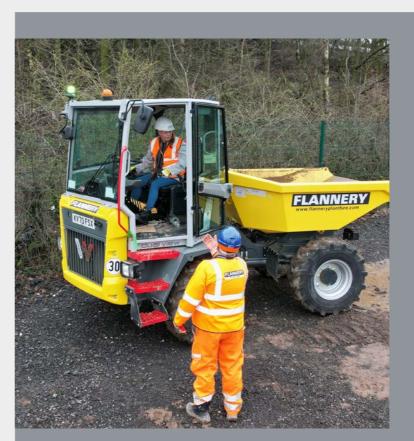

The Operator Skills Hub

Established in 2021, the unique, purposebuilt Operator Skills Hub provides innovative, future-focused training for plant operators. This helps to address the skills shortage in the construction and infrastructure sectors, providing operators with what they need to deliver efficiently on digitally enabled projects.

Our structured training and apprenticeship programmes are delivered through a blended approach of 'on' and 'off' the job training where candidates can earn while they learn. We focus on building confidence and skills with crucial training and support we're always there to support the industry.

Trailblazer apprenticeship scheme

At Flannery we have a successful Trailblazer apprentice scheme making use of the Operator Skills Hub and valuable hands on approach to learning and development.

Thinking of becoming an apprentice? You can read about the experience

Connecting With Communities

Flannery is committed to supporting local communities and building social value. We continue to successfully engage with communities that may be directly affected by our work through skills events, charity work and sponsorship opportunities.

Exciting the next generation

For many years now, Flannery has recognised the benefits of showing school and college students what the Plant industry is all about. Regular school and college engagement days are held at Flannery sites across the UK, where students of all ages get the chance to see the machines in action, learn about career paths, have a go in the plant simulator, and even try their hand at operating a machine.

South & City College Partnership

South & City College and Flannery are working in partnership to attract local talent and residents to join an access training programme in general construction operations and street works. Those with an interest in plant can then progress to a specialist plant training course at the Operator Skills Hub.

BBC Children in Need

Flannery have been proudly raising money for many years for BBC Children in Need to help support disadvantaged children and young people across the UK. Since 2019 the Flannery team have provided the DIY SOS: Big Build team with beautifully unique spotty machines for the duration of their charity builds across the UK.
